THE BESTIARY OF

# UNSPOOLED DREAD

*Compiled by the Combat Division of the Sartryx Defense Unit*

A supplementary document to the Codex Threadica — Year 1003 A.F.

> *"There is no such thing as a true monster —*
> *only what we left behind."*

For internal Sartryx use only. Distribution restricted to Threadguard Division and authorized faculty.

## Origin of the Frayborn

All thread-creatures — commonly designated "Frayborn" within Sartryx Defense classification — originate from discarded or unspooled fate threads. These are threads that were abandoned, violently erased, or deliberately rejected: the residue of fates that were never allowed to complete their weave.

A fate thread that goes unfinished does not simply dissolve. It retains fragments of the consciousness and will it was meant to carry. Given sufficient time, and particularly in corruption-heavy regions such as Laywakilab — where unspooled threads accumulate in concentrations dense enough to achieve critical mass — these fragments coalesce. They take form. They become Frayborn.

The Bestiary classification system recognizes five ranks, designated S through D, ordered by threat level and degree of sentience. The higher the rank, the more complete the original fate thread from which the creature formed — and therefore, the more of a person's worth of consciousness it carries into its monstrous shape.

> *"Every monster was once a thread.*
> *Every thread was once a soul."*
> *— Closing inscription, Sartryx Defense Unit archives*

## A Note on the Threadbreaker's Frayborn ◈

The Frayborn that emerge during Thread Fracture events at the Sartryx differ in one critical respect from standard Frayborn: they are not old. Standard Frayborn accumulate over years or decades in places like Laywakilab. The Threadbreaker's leaked creatures are newly formed — condensed from the threads torn loose by his passage through time, given shape by the ambient fear and magical residue of the Fracture itself.

This means they carry fragments of future threads. Fate that has not happened yet, compressed into creature-form. This is why Noctuliths appearing during Fracture events project visions of things that have not occurred — they are not confabulating. They are carrying forward-memories from the timeline the Threadbreaker came from. And this is why only Preastres can fully seal or purify them: only the Loom's own covenant thread can unmake fate-material that technically does not yet belong to the present.

# Classification System

| Rank | Designation | Threat Level | Sentience | Known Defects |
|---|---|---|---|---|
| S | Vexaris | Catastrophic | Fully Sentient | Emotion-lock, mirrored memory |
| A | Noctuliths | Devastating | Semi-Sentient | Truth distortion, corrupted foresight |
| B | Mirethorns | Dangerous | Low Intelligence | Limbs twisted by thread type |
| C | Shears | Common & Lethal | Non-Sentient | Blindness, reactive muscle-memory |
| D | Threadlings | Minor | Instinctual | Incomplete forms, no vocal cords |

Classification is determined by three primary factors: the completeness of the original fate thread (more complete threads produce higher-rank Frayborn), the degree of sentience retained from the thread's original bearer, and the nature of the thread's rejection (violent erasure tends to produce more dangerous creatures than simple abandonment).

Known Defects are structural — inherent flaws in the Frayborn's formation that stem from the incompleteness or corruption of their source thread. They cannot be trained out. They are, in many cases, the creature's primary vulnerability.

# Monster Index

| S | Vexaris | *Threat Level: Catastrophic* |
|---|---|---|

*"They speak like people. They look like nightmares."*

Origin: Discarded threads of rulers, spinners, or criminals whose fates were too complex to unravel properly. The original bearer's life was so densely woven — so many threads intersecting, so many lives touched — that when rejected, the thread retained too much to dissolve.

Abilities: Mimicry, thread-bending, memory possession. A Vexaris can impersonate someone the target once knew, drawing on fragments of that person's fate-thread to reconstruct mannerism, voice, and memory with disturbing accuracy.

Known Defect: *Cannot feel love. Attempts to imitate it result in violent breakdowns. The emotion-lock is structural — the original thread was discarded because its bearer's capacity for love was precisely what made them too dangerous to leave in the Tapestry.*

*Narrative relevance: A fully sentient creature built from the discarded fate of someone powerful, capable of impersonating anyone — and constitutionally incapable of the one emotion that would make it convincing. The Vexaris is what happens when the Loom decides a soul is too complex to weave but too dense to dissolve. It is, in a sense, the closest thing the Bestiary has to a metaphor for the Threadbreaker himself: something that looks like a person, moves like a person, and breaks in precisely the place where love should be.*

## A Noctuliths

*Threat Level: Devastating*

*"They don't kill you. They make you want to be unmade."*

Origin: Fate threads tangled in contradiction — most commonly, a person fated to both die and live simultaneously. The thread could not resolve its own instruction and was abandoned mid-weave, retaining both outcomes in a permanent, agonizing loop.

Abilities: Project future-visions onto nearby targets, loop time within a small zone, confuse reality by overlaying multiple possible outcomes simultaneously. Their presence makes it impossible to distinguish what is happening from what might happen.

Known Defect: *Can only survive in darkness or moonlight. Sunlight burns their threads away — the Clothos Prophecy's "the Sun shall rise again" is not merely poetic. Direct Preastres-class light is lethal to Noctuliths specifically.*

*Narrative relevance: Noctuliths appearing during Threadbreaker Fracture events carry forward-memories from the future timeline. Their projected visions are not*

*hallucinations — they are compressed fragments of fate that has not happened yet. This means characters who survive a Noctulith attack may have genuine glimpses of what the Threadbreaker's timeline looked like. They will not understand what they saw. Not until later.*

## B Mirethorns

*Threat Level: Dangerous*

*"You hear them before you see them. They sound like rusted looms."*

Origin: Threads abandoned mid-weaving — typically due to social exile, forgotten fates, or deaths that went unrecorded. The thread was not violently rejected; it was simply never returned to. The resulting creature is defined by incompleteness.

Abilities: Thorned limbs capable of physical assault. More significantly: can infect existing threads with rot — a gradual corruption that spreads along a person's Birth Thread if they sustain a direct hit. Thread-rot left untreated frays the bearer's connection to their own fate.

Known Defect: *Must anchor to the ground every three hours or begin to unravel. This ground-anchoring requirement means Mirethorns are significantly less dangerous in the Weaveflight Arena, where the floor is suspended mid-air, than they would be on solid ground.*

## C Shears

*Threat Level: Common & Lethal*

*"Blinded by creation. Born only to sever."*

Origin: Discarded en masse in Laywakilab — threads rejected for impurity, instability, or taboo. Unlike higher-rank Frayborn, Shears form from the collective accumulation of many discarded threads rather than a single complex fate. They are numerous, cheap, and expendable.

Abilities: Razor limbs that slice fate directly — a Shear's cut damages not just the body but the thread, which is what makes their C-rank threat designation misleading. They are physically minor but magically lethal. Navigate purely by threadsense: a perception of living magic that makes them effectively undeceivable by illusion.

Known Defect: *Blind. Their threadsense is precise but limited — they react to thread movement, not intention. A skilled Binder who can still their own thread can pass through a Shear cluster undetected.*

## D Threadlings

*Threat Level: Minor*

*"Children of discarded thoughts."*

Origin: Fate threads unclaimed at birth — the residue of souls whose threads were prepared but never inhabited. Emotionless fragments that coalesced into the most basic possible form.

Abilities: Minor thread coiling. Can disrupt magical focus in groups — individually negligible, collectively a significant source of interference during sustained Threadica use.

Known Defect: *Cannot grow. Permanently fixed in infantile forms. Often mistaken for enchanted debris. Their non-vocal nature means they produce no sound warnings. Many first encounters are unannounced.*

*Narrative relevance: Threadlings are not dramatically threatening. But their origin — threads prepared for souls that never arrived — makes them one of the Bestiary's quietest horrors. Something was supposed to be born. It wasn't. This is what that unanswered preparation becomes, given enough time alone.*

# Weaponization & Rogue Use

> *"It is confirmed that certain rogue factions have begun*
> *harvesting unspooled threads intentionally,*
> *binding them with cursed weaves to create and control monsters."*
> *— Sartryx Defense Unit, Threat Assessment Year 1001 A.F.*

The process by which Frayborn can be harvested and controlled — rather than simply encountered — represents a significant escalation in Sartryx threat assessment. Standard Frayborn form and behave according to their source thread's instincts. Weaponized Frayborn are a different category.

## The Threadbinder Method

Threadbinders use ancient spell-loops and illegal loom constructs to feed discarded threads selective memories — curated fragments of purpose, loyalty, or fear — forcing monsters into functional servitude. The process requires knowledge of both Unraveling and Weaving disciplines at advanced level, applied in an ethically prohibited combination. It is not taught at the Sartryx. It is, however, described in certain sealed sections of the Oraisayn archives.

S-Class Vexaris have shown resistance to Threadbinder control. Their retained sentience makes memory-imprinting unstable — a fully sentient creature that has been fed false memories will eventually notice the discontinuity. Lower-ranked Frayborn are more reliably controllable, which is why Shears and Threadlings are the most commonly weaponized.

## The Threadbreaker as an Unintentional Threadbinder ◈

The Threadbreaker does not deliberately weaponize Frayborn. He is not a Threadbinder. But the effect is functionally similar: his presence tears holes in the Tapestry, and the Frayborn that pour through those holes are shaped by the ambient fear and intention of the person whose existence created the opening. His grief, his desperation, his specific targets — all of these bleed into the creatures he leaks.

This is why his Frayborn do not attack Seraphina. It is not a command he issues. It is a structural truth of what he is: the wounds he tears in the world carry his prohibitions in them. His monsters cannot harm her because he cannot harm her. They are extensions of him, not tools he controls.

# Sartryx Response Protocols

## The Threadguard Division

The Threadguard Division was formed in direct response to the increase in Frayborn incidents — specifically the appearance of Thread Fractures at the Sartryx itself, which no Frayborn emergence had previously reached. Its mandate is the neutralization of Frayborn and the containment of Thread Fracture events.

Standard neutralization protocols apply by rank: Threadlings and Shears are handled by second-year students under supervision. Mirethorns require Threadguard deployment. Noctuliths require a minimum of three senior Wardens. Vexaris encounters are to be reported immediately; no engagement without Preastres-level support present.

## On Preastres as the Only Full Seal

The Codex is unambiguous on this point: only Preastres is known to fully seal or purify Frayborn threads. Standard Threadica can neutralize, suppress, or temporarily contain Frayborn, but the corrupted fate-material that constitutes them cannot be unmade by conventional discipline. It requires the Loom's own covenant thread — the same force that holds the Tapestry together — to unweave what the Tapestry rejected.

This creates a significant strategic reality: Seraphina Moon, whether she knows it or not, is the most powerful anti-Frayborn resource in the Sartryx. She is also the Threadbreaker's primary target. The creatures she is the only one who can fully purify are the creatures he leaks specifically in her presence.

This is not irony. This is fate being very deliberate about who it has chosen.
